Warmup/Attendance: [Week 2: Wednesday 9/2/2026]

Full Name: SID:

- As you sit down in class, start working with the people around you to try to solve these problems
- These are *not* graded for correctness, but you will turn this sheet in for attendance at the end of class.
- We'll discuss the solutions in lecture today.

Types of Proportions

1. The table below displays data from a survey on a class of students.

- What proportion of the class was in the marching band?
  - What type of proportion is this?

2.

- What proportion of those in the marching band where juniors?
  - What type of proportion is this?

3.

- What proportion were sophomores not in the marching band?
  - What type of proportion is this?

4. What were the dimensions of the raw data from which this table was constructed?

5. How would you characterize the association between these two variables? (year in school, marching band status)

Reading plots with proportions

The General Social Survey is a widely used source of data on the attitudes, behaviors, and attributes of Americans. This plot shows the relationship between the political affiliation and college degree status of 500 participants.

6. Which group is the largest?
