Instructions

Refer to the section **Analytical Tasks (by Stephen Few)** of today's slides. For each of the 6 graphics displayed in the slides, answer the following:

- What geometry/geometries are used?
- What variable is mapped to the x-axis?
- What variable is mapped to the y-axis?
- Are other visual attributes used (e.g., size, shape, facets)?
- How is color used: data-encoding or decorative?
- How many total variables are represented in the graphic?
- What primary analytical task(s) (by Stephen Few) does the plot serve?
- If annotations are present:
 - do they describe data points?
 - or do they highlight a specific takeaway?

NOTE: You do NOT need to write ggplot code today. Today's worksheet is conceptual and requires you to think through the Grammar of Graphics framework.
