# Instructions

Refer to the section **Analytical Tasks (by Stephen Few)** of today's slides. For each of the 6 graphics displayed in the slides, answer the following:

a) What geometry/geometries are used?
b) What variable is mapped to the x-axis?
c) What variable is mapped to the y-axis?
d) Are other visual attributes used (e.g., size, shape, facets)?
e) How is color used: data-encoding or decorative?
f) How many total variables are represented in the graphic?
g) What primary analytical task(s) (by Stephen Few) does the plot serve?
h) If annotations are present:
   - do they describe data points?
   - or do they highlight a specific takeaway?

*NOTE:* **You do NOT need to write ggplot code today.** Today's worksheet is conceptual and requires you to think through the Grammar of Graphics framework.
